The above is the first of the six prescribed goals of the National Science Foundation's Office for the International Decade of Ocean Exploration. In pursuit of this goal, IDOE, in 1971, carried out a one-year Baseline Data Acquisition Program and in the following year initiated the Pollutant Transfer Program. The Baseline Program indicated the present levels of contamination by trace metals and petroleum and chlorinated hydrocarbons in water, sediment and biota of the oceans. The Pollutant Transfer Program provides information on the pathways or mechanisms controlling the rate of pollutant transfer from the source to and within the ocean, the information so necessary for predicting the distribution of pollutants, for assessing whether the oceans are becoming measurably polluted, and ultimately for indicating rates at which pollutants may be released safely to the environment. The IDOE **Effects of Pollutants on Marine Organisms** Program is designed to learn whether the levels of pollutants shown to be present in the oceans in the Baseline and Transfer...
